

4. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said pair of wall members are overlapping one another and are substantially aligned during engagement and marking a page of a book.
5. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said cover member constitutes a guiding means for admission of an edge of the page into said throat of the clip marker.
6. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said cover member covers both said magnetic members and the at least one external surface of the overlapping base and clip portion.
7. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said cover member is a film made of plastic material.
8. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said cover member is a film made of cellulosic material.
9. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said pair of wall members are rectangular.
10. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said pair of wall members are circular.
11. (cancelled) The magnetic clip marker in accordance with claim 9, wherein at least one edge of said pair of wall member is transverse to said junction therebetween to form a line signaling member on the page of the book.
12. (cancelled) The magnetic clip marker in accordance with claim 21, wherein one of said base portion or said clip portion has a length greater than the other.
13. (cancelled) The magnetic clip marker in accordance with claim 21, wherein at least one of said base portion or said clip portion includes an opening to provide a line identification on the page of a book.
14. (cancelled) The magnetic clip marker in accordance with claim 13, wherein said opening forms an ornamental design.
15. (cancelled) The magnetic clip marker in accordance with claim 1, wherein at least one of the external surfaces of the page market opposite said throat includes an exterior surface oriented to bear a device providing a visual display of information attached thereto.

16. (cancelled) The magnet clip marker in accordance with claim 1, wherein at least one of the external surfaces of the page marker opposite said throat opening includes an outer cover member.

17. (cancelled) The magnetic clip marker in accordance with claim 21, wherein said base portion and said clip portion include wedge members structurally arranged to cooperate with said magnetic members to permit the page of the book to be readily received within said throat of the clip marker.

18. (cancelled) The magnet clip marker in accordance with claim 1, wherein at least one of the external surfaces of the clip marker provide an application surface for an embossment.

19. (cancelled) The magnet clip marker in accordance with claim 1, wherein said pair of wall members are aligned and joined at one end thereof to define said throat therebetween.

20. (currently amended) A magnetic clip marker for use in engaging and marking a page of a book, the clip marker including in combination: magnetic members each exhibiting a thickness; a pair of wall members of unequal length aligned and joined together at a throat to define an integral structure exhibiting a overlapped normal working position with opposing normally closed orientation with opposite surfaces of said wall members providing a continuous interior surface extending between said throat and terminal ends of said wall members, with said wall members comprised of a base portion adjacent said terminal ends and a clip portion overlapping said base portion to define said throat as a junction between said wall members and structurally arranged to receive insertion of a page of a book between said base portion and said clip portion until an edge of the page engages said throat, said wall members supporting said magnetic members along said interior surface in aligned facing opposition to permit ~~contact between said magnetic~~ attraction and compression between said magnetic members; and a cover member disposed along said interior surface to form a continuous layer extending from a first of said terminal ends, around said throat and to a second of said terminal ends while covering and separating said magnetic members and forming a continuously gradual structural transition between said interior surface and said magnetic members that accommodates a difference in separation between said opposite wall members and

between said magnetic members attributable to said thickness, allowing the sliding insertion of the page within the throat of the clip.

21. (currently amended) A magnetic clip marker for use in engaging and marking a page of a book, the clip marker including in combination: a plurality of discrete magnetic members each exhibiting a thickness; a pair of wall members of unequal length aligned and joined together at a throat to form an integral monolithic structure exhibiting a overlapping normal working position ~~normally-closed orientation~~, with said wall members comprised of a base portion adjacent to terminal ends ~~of said wall members~~ and a clip portion overlapping said base portion and extending to said throat, said wall members being oriented to receive insertion of a page of a book bearing said magnetic members mounted ~~between said base portion and said clip portion until an edge of the page engages said throat, said wall members bearing said magnetic members mounted~~ between said wall members, in aligned facing opposition to permit ~~contact between said~~ magnetic attraction and compression between said magnetic members; and a cover member disposed along said interior surface ~~of one of said pair of wall members~~ to form a continuous layer extending from a first of said ~~terminal-distal~~ ends, around said throat and to a second of said distal ~~terminal~~ ends while covering and separating said magnetic members and forming a continuously gradual structural transition between a difference in separation between said opposite wall members and between said magnetic members attributable to said thickness, allowing the sliding insertion of the page within the throat of the clip.

22. (cancelled)

23. (new) The magnetic clip marker in accordance with claim 20, where the folding line of the integral structure of the clip is arranged at a medium distance defined between the pair of magnetic members and is less structurally resistant so as to provide a correct alignment between the pair of magnetic members.

24. (new) The magnetic clip marker in accordance with claim 21, where the folding line of the monolithic integral structure of the clip is arranged at a medium distance defined between the pair of magnetic members and is less structurally resistant so as to provide a correct alignment between the pair of magnetic members.

25. (new) The magnetic clip marker in accordance with claim 20, where the structural disparity of the longer wall member in relation to the opposite wall member and the cover member disposed along the interior surface provides a guiding means that facilitates the insertion of the page within the throat of the clip.

26. (new) The magnetic clip marker in accordance with claim 21, where the structural disparity of the longer wall member in relation to the opposite wall member and the cover member disposed along the interior surface provides a guiding means that facilitates the insertion of the page within the throat of the clip.

27. (new) The magnetic clip marker in accordance with claim 20, where a portion which is part of the integral structure of the clip extends in a linear way to one of the wall members and in the opposite direction to the throat of the integral structure of the clip.

28. (new) The magnetic clip marker in accordance with claim 21, where a portion which is part of the integral structure of the clip extends in a linear way to one of the wall members and in the opposite direction to the throat of the monolithic integral structure of the clip.

29. (new) The magnetic clip marker in accordance with claim 20, where the cover member disposed on the surface of the integral structure of the clip is less thick than that of the structure of the wall members.

30. (new) The magnetic clip marker in accordance with claim 21, where the cover member disposed on the surface of the monolithic integral structure of the clip is less thick than that of the structure of the wall members.
